# Problem statement and domain

More time is require for launching an FIR in Police Station to find lost person. Also during manual process number of manpower for searching lost person is less.

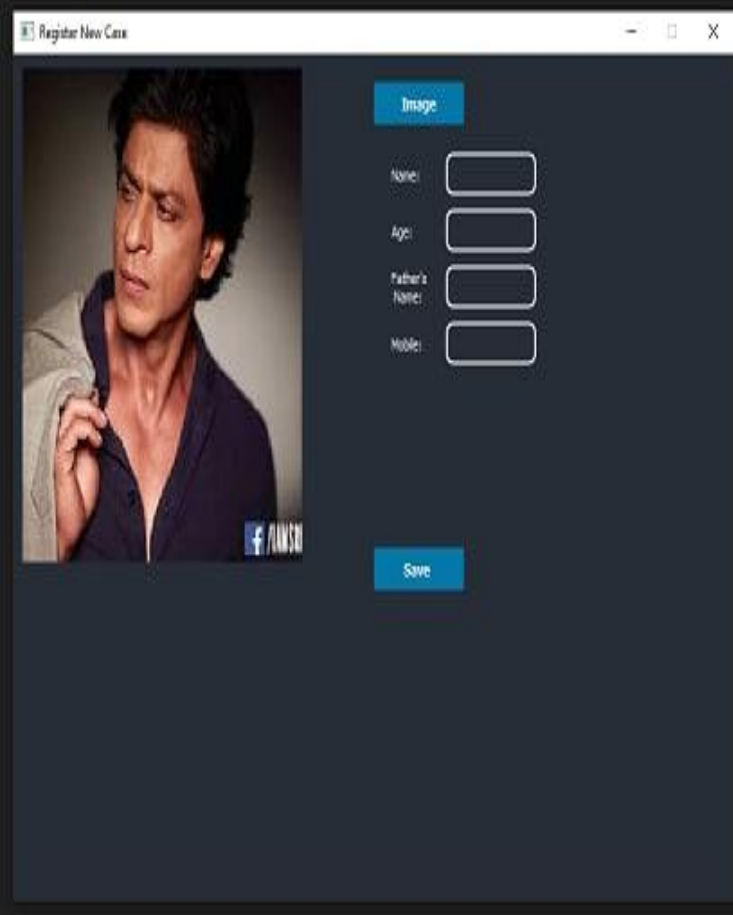

To overcome from this , we wanted to develop an application which makes the task easier to find the missing person.

## *Existing solutions/ Naïve solutions*

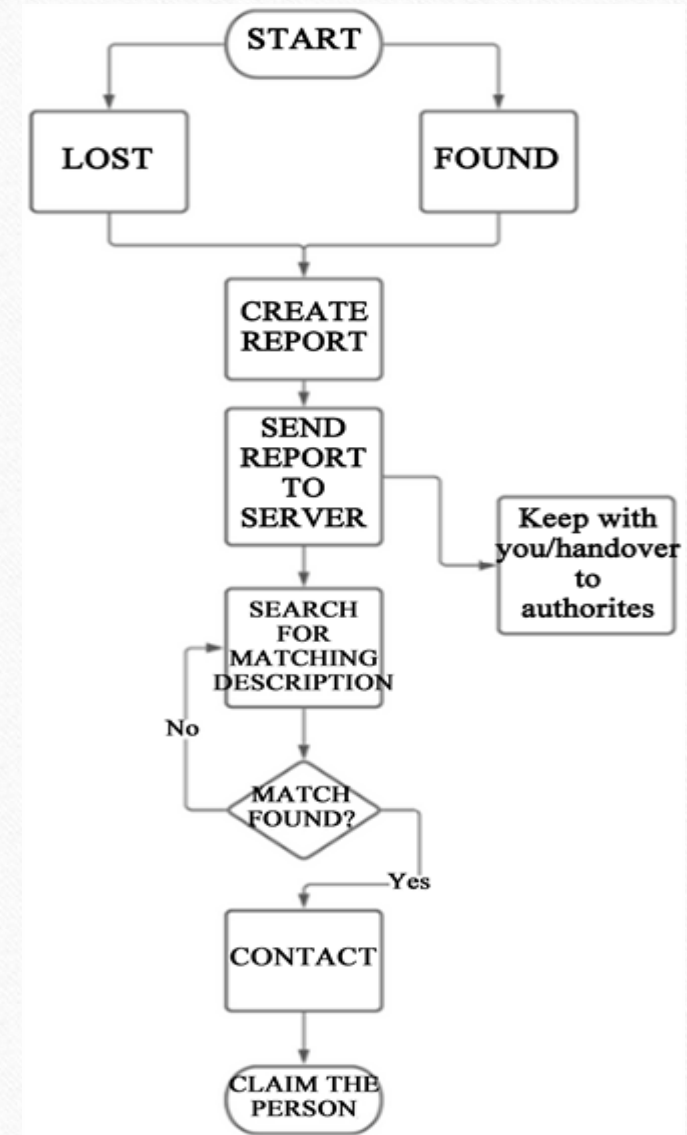

- There are many lost and found systems which are more concerned with things like mobile phones, watches, wallets, etc.
- The names of such systems are vFound, etc.
- The US National Institute of Justice's National Missing and Unidentified Persons System (NamUs) is a national centralized repository and resource center for missing persons.

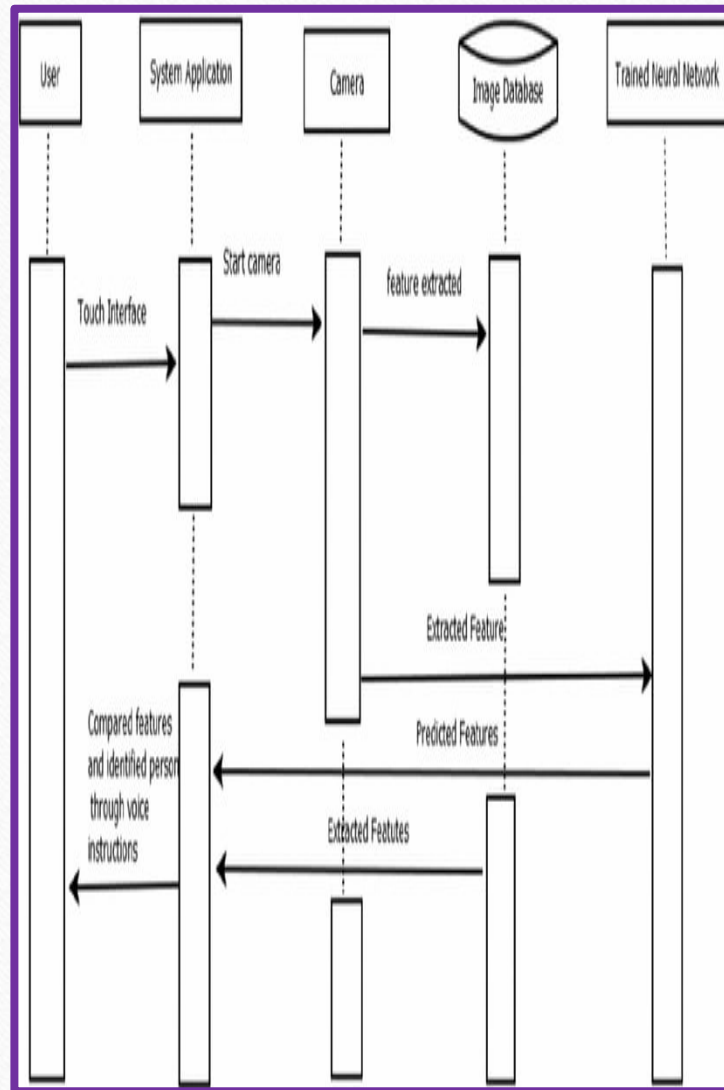

The screenshot shows a web browser window titled "Register New Case". On the left is a large placeholder image of a man. To the right of the image is a form with the following fields: "Image" (with a blue button), "Name:" (text input), "Age:" (text input), "Father's Name:" (text input), and "Mobile:" (text input). Below these fields is a blue "Save" button. A small Facebook logo and the text "f /NAMUS" are visible in the bottom right corner of the image placeholder.

# *Proposed Algorithm Design Technique*

- Our web application takes required information of a lost person and matches with the others, and then it displays the result.
- The main advantage is that was easy to upload the complaint and view it.
- And the drawback is that it requires internet connection and an Android phone with camera.

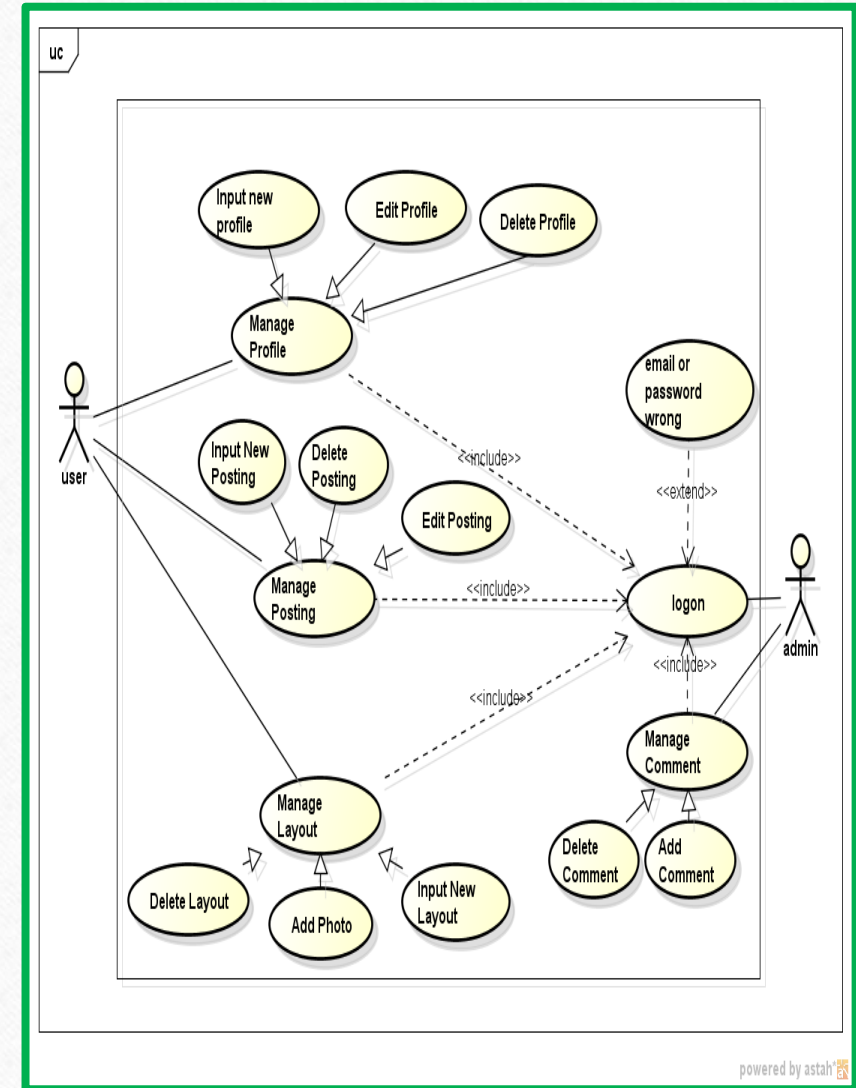

SEQUENCE

# Design Modelling Diagrams

USE - CASE

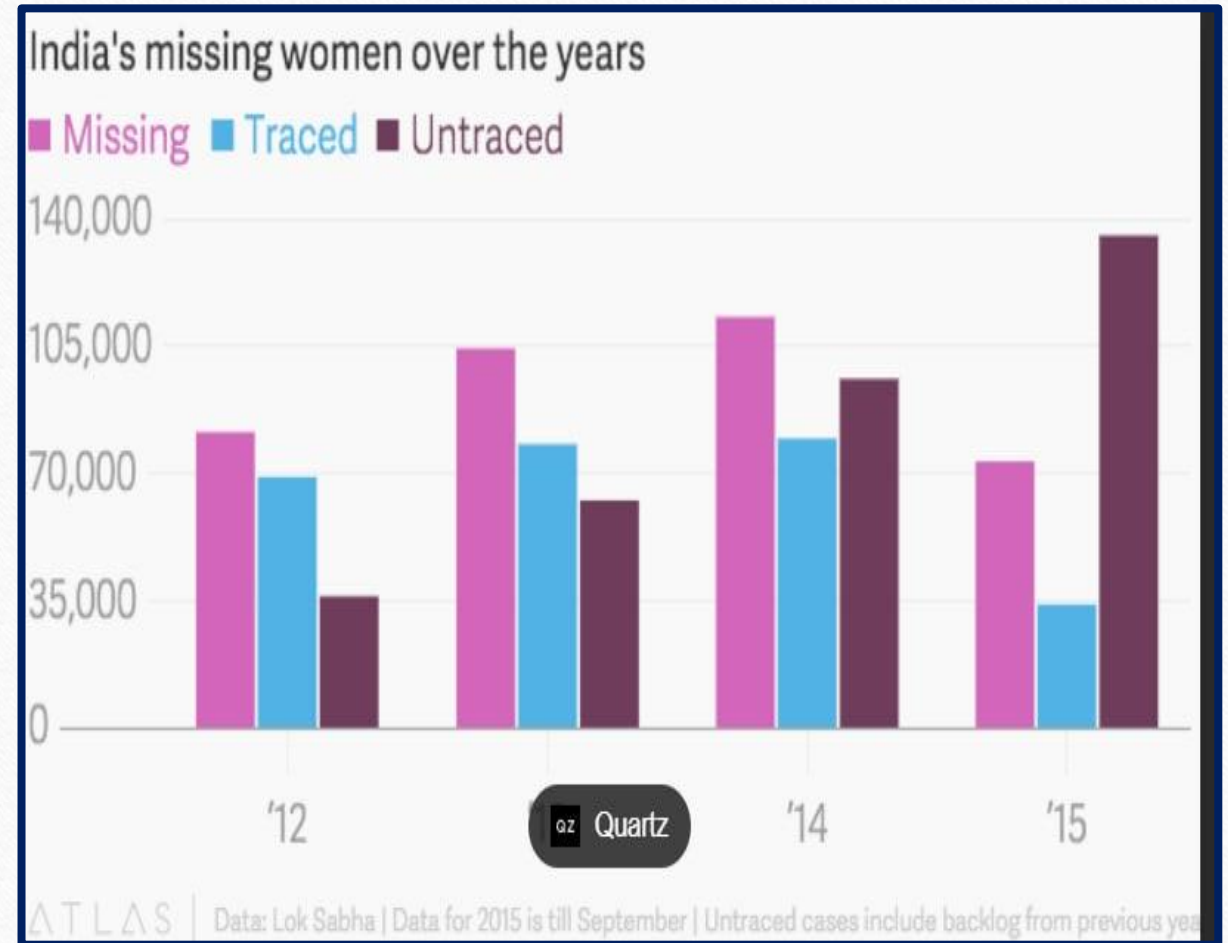

# Merits & Demerits

## Merits of our application :

- ☐ Easy to upload and view Complaint.
- ☐ All trust users can add complaint.
- ☐ Simple GUI.
- ☐ Easy to view information

## Demerits of our application :

- ☐ Require Internet connection.
- ☐ Require android phone with camera.

# Required Data Base & Tools

Database is responsible for storing all information in well-defined format. Also it responds to the queries fired by client to add, update, remove or search records.

In Our project we have used

- Django - Pycharm ( As FrontEnd )
- SDK
- PythonTwinker
- StarUML & MySQL ( As BackEnd )
- XAMPP Server with APACHE database to store information.

## HARD WARE

## SOFTWARE

A. Hardware Requirement:

Processor: Intel 1.66GHz

Processor Pentium 4

RAM: 256MB Hard disk:  
80GB

Device: GPRS enabled Mobile  
Phone with Android  
OS

**Some 174 children go missing every day. Only about 50% of them are ever found again. But the story behind these statistics is complex**

Shehzadi Malik has watched the seven-minute video clip on her phone a few hundred times these past three months. Sometimes she is looking for clues. Sometimes she is just watching it, empty of hope. Sometimes she is simply looking at her nine-year-old boy, Kabir. This CCTV footage was given to Malik by the police, on a pen drive, and it's the last record she has of her son, who went missing on May 11 this year.

In the video, at 2.25 p.m. that day, Kabir enters the frame; he is walking back from tuitions in Delhi's Nizamuddin colony – as he has done for two years – carrying a big red-and-black schoolbag on his back. His gait is jaunty but he seems to be in no particular hurry; at one point he appears to mock-bowl with his left hand, at another he stops to pick up something from the pavement, maybe a coin or a pebble. He doesn't exit the frame, he gets obscured by a row of Ashoka trees, then the video ends. "Can you see him standing behind the tree?" Malik asks, pointing to a corner of the phone screen where a portion of his black trousers is just about visible through the foliage. "Maybe he is waiting for someone, or talking to someone. He is a friendly child, he spoke to everyone in the area," she says, the possibilities clearly confounding her.

## Articles

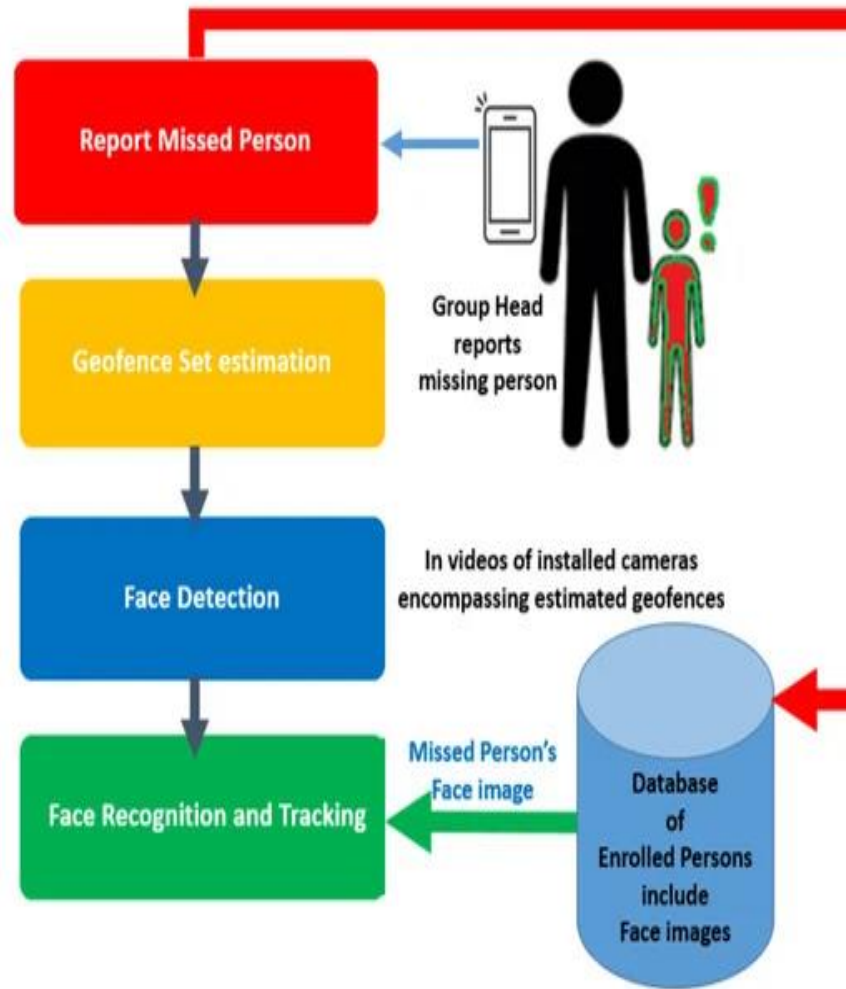

**Bengaluru:** A deeply disturbing fact about India's missing children is that while on an average 174 children go missing every day, half of them remain untraced. The National Crime Records Bureau (NCRB) report which was cited by the Ministry of Home Affairs (MHA) in the Parliament (LS Q no. 3928, 20-03-2018), more than one lakh children (1,11,569 in actual numbers) were reported to have gone missing till 2016, and 55,625 of them remained untraced till the end of the year.

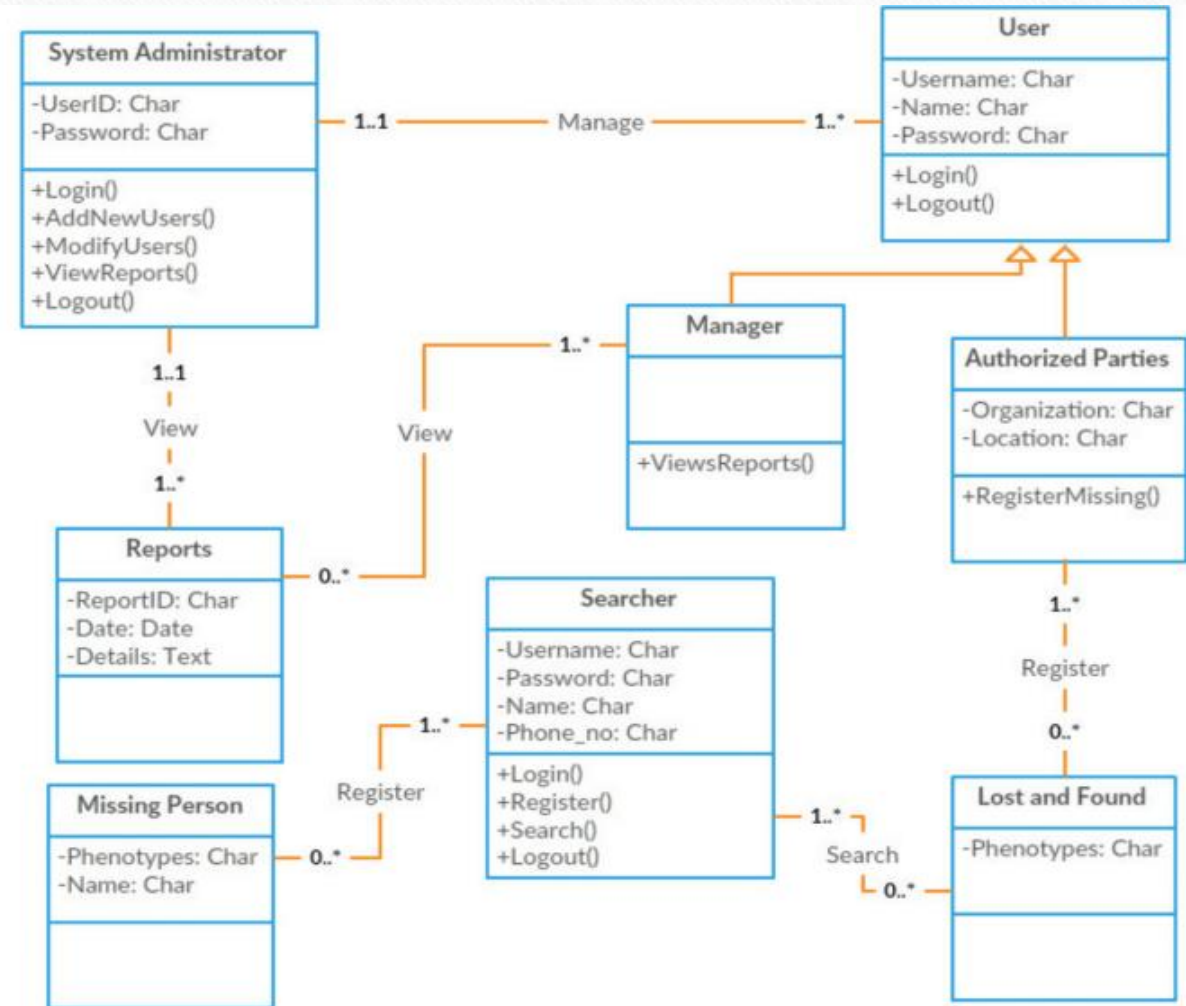

The statistics are however, indicative of the absence of a national Missing Children's repository. "There are no budgets earmarked for tracking missing people," said an official source.

## LOST ISSUE ENTRY FORM

Try to fillup all the fields. Write n/a if not applicable

<input type="text" value="Muntaha Mahnur"/>	
<input type="text" value="Mossarof Hossain"/>	<input type="text" value="Shayla Sharmin"/>
<input type="text" value="6"/>	<input type="text" value="4"/>
<input type="text" value="15/09/20"/>	<input type="text" value="Dhaka"/>
<input type="text" value="White"/>	<input type="text" value="Frock"/>
<input type="text" value="shaymoly road no 2, ol"/>	<input type="text" value="01793625781"/>
<input type="text" value="n/a"/>	

Submit →

## FLO ADVANCED SEARCH ENGINE SEARCH FOR FOUND PEOPLE

The more the field input, the narrower the results, the less the inputs the more possibility to find the results.

<input type="text" value="Full Name"/>	
<input type="text" value="Father's Name"/>	<input type="text" value="Mother's Name"/>
<input type="text" value="Age"/>	<input type="text" value="Height"/>
<input type="text" value="Lost Location"/>	
<input type="text" value="Skin-Tone"/>	<input type="text" value="Dress"/>
